

ClimaFläkt

Chillers Catalogue 2011

FläktWoods

Total Energy Control

Modern HVAC systems are designed to provide a comfortable and hygienic indoor environment so that top performance is gained from the use of the building and its occupants. For that you need to choose effective ventilation and cooling systems that provide you with the right Indoor Air Quality and appropriate temperature control.

Fläkt Woods offers all the pieces in the puzzle from individual components through to the provision of complete air systems, now complete with a range of chillers and air based cooling equipment.

Fläkt Woods' contribution towards a sustainable environment is to offer products and know-how for more efficient energy usage in all types of buildings. Global energy prices are increasing in real terms and the HVAC system in a building can often be the biggest consumer of power. It makes economic sense to invest in a system optimized for best overall efficiency. Fläkt Woods experience and advanced technology can be combined into intelligent system solutions.

FLÄKT WOODS TURNKEY SOLUTIONS

With Fläkt Woods as your partner you can source all of your key HVAC equipment with a single contact offering comprehensive technical support and responsibility from terminal units to central plant.

FULLY CERTIFIED EQUIPMENT

Under the Eurovent Certification Program equipment is tested to specific standards by independent testing organizations. Consultants, Specifiers and Users can select products from certified manufacturers with the assurance that the catalogue data are accurate. This is a corner stone for those in the business of marketing or procuring energy efficient equipment since catalogue data is used for comparison.

General

All in one

From the very beginning Fläkt Woods decided to equip its units with all devices necessary for operation. Every product is therefore designed, made and tested together with every accessory necessary for its operation. Use of external components, which are always difficult to select and size, is thus reduced to a minimum. This also means a drastic reduction in the necessary work on site for installing the unit.

Fläkt Woods units give peace of mind as they offer an integrated design, industrial construction and final test and inspection complete with all components, so that they arrive on site ready for operation.

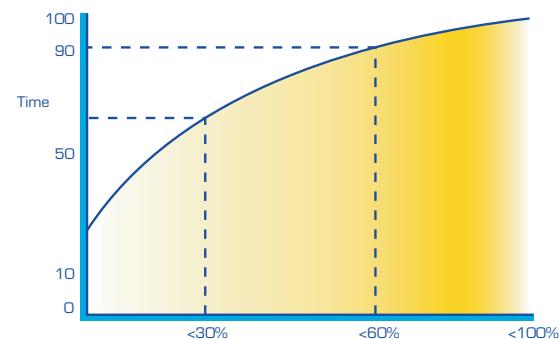

No more storage tanks

Water storage tanks have always been troublesome to install, bulky and a source of enormous heat loss. They were, however, necessary to preserve the working life of the compressors, which was otherwise shortened by the excessive activation required to follow the system loads.

Fläkt Woods enables the waste represented by storage tanks to be eliminated by dividing up the power of the compressors installed in its units, which can consequently follow the changes in heating or cooling load in the best way possible. All the units also have the "sliding temperature" function, which in the single-compressor units permits modulation of the supply water temperature in relation to the system load. This modulation is important for optimisation of the compressor operating cycles, so that they remain within safety limits even without the installation of a storage tank.

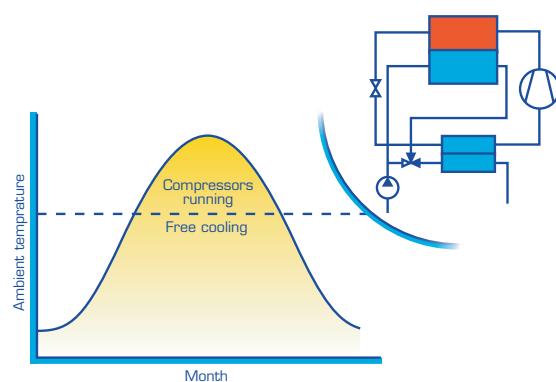

Variable load

Chillers in HVAC applications are generally required to operate most of the year at part load and for 90 % of the time the load is less than 60 % of the maximum design. The Fläkt Woods range of chillers are designed for high efficiency at part load as well as at peak load to minimise the overall annual energy consumption.

Free cooling

In many applications, cooling water is needed during periods of the year when the outdoor temperature is low. By installing a chiller with a free cooling circuit it is possible to cool the water without running the compressors, which saves a considerable amount of energy and reduces wear on them. Free cooling is best suited to high water temperatures and low ambient temperatures.

General

High efficiency condensor fans

The Fläkt Woods air cooled chillers can be fitted with high efficiency fans making use of electronic controll to vary the speed with minimum use of electricity.

HYDROPack

The HYDROPack device was created to simplify to the utmost water connections of the units, while allowing freedom of choice in respect of configuration and the range of pumps to be installed.

Further benefits of this system are the possibility of reducing the risk of unit failure, as it will always continue to operate even if a pump breaks down, of having a stand-by pump that may be activated immediately and of intervening very fast if pumps need replacing. The units fitted with this device are also selfadapting with regard to the water flow rate in order to prevent blocking caused by overloads, which are always possible after prolonged periods of inactivity in the summer.

Applicable units:
KCCC, KCAF, KCCE.

ESEER

Guarantee in the performance means to be able to plan realistically the energy consumption and then the costs.

The ESEER (European Seasonal Energy Efficiency Ratio), contrarily to the simple EER, is calculated as a combination of different operating conditions, which have been recently declared by Eurovent/CEN, in order to demonstrate the chiller efficiency while operating also in off-design conditions, normal in the mid-season.

KC(A,B)A Air cooled water chiller/heat pump for outdoor installation

KC(A,B)A: Capacity from 4.32 to 37.2 kW
KC(A,B)A water cooling units use R-410a refrigerant. Because they are so compact, they are ideal for residential applications. And they keep on working under all conditions thanks to a variable speed fan and water pump.

The KCAA and KCBA units offer the following features:

- silent operation thanks to a fan unit that operates at only 70 % of its maximum speed under normal conditions.
- storage-free operation and temperature modulation for a perfect balance between output power and energy consumption.

Accessories

KC(A,B)A

- Rubber antivibration mounts *
- Serial communication module to supervisor (MODBUS) *
- Phase monitor *
- Double temperature control kit *
- Set point compensation with according to outdoor enthalpy *
- Set point compensation with 4-20 mA signal *

* Accessories supplied separately

| Power supply | V/Ph/Hz | | 230/1/50 | | | | | | | | | | | | | 400/3/50+N |

Data referred to the following conditions:

- (1) Internal exchanger water = 12/7 °C;
external air temperature 35 °C.
(2) Total input is obtained from compressor input + fan input
(3) Air at external exchanger inlet = 6,1°C W.B.;
internal exchanger water = 40/45°C

- (4) ROT = rotary compressor.
(5) Sound levels refer to units with full load under nominal test conditions. The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.

Dimensions and functional spaces

CAUTION! For trouble-free operation of the unit it is essential to maintain the safety distances indicated by the green areas.

KCAG and KCBG Air cooled water chiller/heat pump for outdoor installation

KCAG and KCBG

KCAG and KCBG: Capacity from 24,3 to 72,2 kW

Liquid chillers and heat pumps of the KCAG and KCBG series are units designed for outdoor installation and best energy efficiency in relation to their reduced size.

Every unit has been conceived and made by applying state-of-the-art technology, emphasising the qualities of efficiency, self-adaption and easy installation that distinguish this product.

Thanks to its constructional and electronic peculiarities, these Chillers permit:

- High energy efficiency, in particular during partial load operation, thanks to the use of two compressors with different capacities that work on a single refrigerant circuit;
- Eurovent energy efficiency classification class "A" in heating operation, also in full load condition;
- Adaptability of operating parameters to the load conditions of the connected system, thereby optimising consumption, efficiency and working life of the parts;
- Easy, quick installation thanks to the standard hydronic group and the factory test carried out prior to dispatch;
- Installation of hydronic group with non-standard working head pumps or with double pump.

Accessories

- Rubber antivibration mounts*
- Serial communication module (MODBUS)*
- Steel mesh filter on water side* (when unit is in "without hydronic group" configuration)
- High and low pressure gauges*
- Daily and weekly programming clock*
- Finned coil protection grilles*
- Phase monitor*
- Set point compensation with according to outdoor enthalpy*
- Set point compensation with fresh air sensor*
- Remote keypad*

* Accessories supplied separately

KC(A,B)J Air cooled chiller for outdoor installation

KC(A,B)J

KC(A,B)J: Capacity from 88.1 to 203 kW

The heat pumps and liquid chillers guarantee maximum energy efficiency throughout the entire operating cycle. Designed for outdoor installation, they use several Scroll compressors of different sizes in the same cooling circuit. Thanks to its construction features, KC(A, B)J offers:

Optimised for heating, the range guarantees:

- Eurovent class A energy efficiency rating in heating mode, thanks to its high performance not just in full loads but also in partial loads.
- Self-adaptability in different load conditions, thanks to the availability of several capacity steps and the adjustment logic developed for maximum efficiency and minimum wear.
- Very high overall reliability, thanks to the consolidated construction choices and the use of industrially-made products.
- Lower sound emissions, achieved thanks to the optimal sizing of the exchange surfaces and the use of high efficiency fans with "winglets".
- Quick and easy installation thanks to the quick connections with the main circuit, electrical wiring enablement and complete functional testing before delivery. The units can also be supplied with pump assemblies, partial heat recovery and inertial storage tank already installed on board, bringing together all the system's main components in a single solution.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/aluminium condensing coil with Fin Guard Silver shell
- Copper/copper condenser coil
- Spring antivibration mounts
- Condensing coil protection grilles
- Shut-off valve on compressor supply and return
- High and low pressure gauges
- Hydropack with 2 pumps
- Hydronic assembly with 1 x pump
- Hydronic assembly with 1 x pump + 1 x pump in stand-by
- Storage tank with antifreeze heater
- Storage tank with antifreeze heater and primary/secondary circuit
- Steel mesh filter on water side
- Set point compensation with 0-10 V signal
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Phase monitor
- Soft Start
- Shunt capacitors (power factor > 0,9)
- LonWorks serial converter kit
- BACnet serial converter kit
- Free contacts for compressor status
- Unit microprocessor remote control interface kit

Data referred to the following conditions:

- (1) Internal exchanger water = 12/7 °C; ambient temperature = 35 °C
 (2) Internal exchanger water = 40/45 °C; air at external
 (3) exchanger inlet = 6,1 °C W.B.
 Sound levels refer to units with full load under nominal test conditions. The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.
 (4) Internal exchanger water = 23/18 °C; ambient temperature 35 °C.
 (5) Internal exchanger water = 30/35 °C; air at external exchanger inlet 6,1 °C W.B.

KC(AB)J Air cooled chiller for outdoor installation

Dimensions and clearances

CAUTION! For trouble-free operation of the unit it is essential to maintain the clearance green.

KCCC and KCDC Air cooled water chiller/heat pump for outdoor installation

KCCC and KCDC

KCCC and KCDC: Capacity from 163 to 493 kW

The R-410A multi Scroll chiller series presents a new concept of chiller offering:

- **Efficiency**, that increases as the cooling load decreases, while guaranteeing maximum requested load when necessary. Multi Scroll always ensures maximum comfort with very high efficiency and consequently considerable energy savings;
- **Reliability**: a modular approach. Several basic units may be connected together to form a single structure according to the required capacity. This allows high production standardisation and therefore utmost operating reliability;
- **Self-adaptation**: simple unit-system combination, since these units are self-adapting to the characteristics of the actual system, thereby avoiding delicate, time-consuming calibrations. Easy connection to the service system plus a simple control system and easy maintenance drastically reduce work requiring specialised personnel with consequent reduction in installation costs;
- extended operating limits to keep the system running, even under exceptional start-up and load conditions;
- customisation of the unit, also for special requirements both in the civil and technological air-conditioning sphere, thanks to the many available optional accessories. The high performance fans and pump set accessories in particular enhance the qualities of flexibility and energy efficiency. The latter, for example, consistent with the concept of modularity, has several pumps in parallel (up to 3) with the possibility of reserve pump, to

monitor the system load variations better and to regulate the water flow in the critical system starting (or restarting) stages so that outside servicing is avoided.

The innovative and hi-tech features of multi Scroll chiller give this series a much higher quality than can generally be found on the market today.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Spring antivibration mounts*
- Compressor compartment and condenser coil protection grilles
- Shut-off valve on compressor suction and discharge
- High and low pressure gauges
- Pump set with 2 pumps
- Pump set with 2 pumps + 1 in stand-by
- Pump set with 3 pumps
- Pump set with 3 pumps + 1 spare onboard
- User side anti-ice electric heaters for hydronic group
- Aluminium cover for hydronic group
- Steel mesh filter on water side*
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Device for reducing consumption of the outdoor section fans
- Phase monitor
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger*
- Master-slave operation*
- Free contacts for compressor status
- Remote control with remote microprocessor control*

* Accessories supplied separately

KCCC Air cooled chiller for outdoor installation

KCCC

KCCC: Capacity from 511 to 965 kW

The R-410A multi Scroll chiller series presents a new concept of chiller offering:

- **Efficiency**, that increases as the cooling load decreases, while guaranteeing maximum requested load when necessary. Multi Scroll always ensures maximum comfort with very high efficiency and consequently considerable energy savings;
- **Reliability**: a modular approach. Several basic units may be connected together to form a single structure according to the required capacity. This allows high production standardisation and therefore utmost operating reliability;
- **Self-adaptation**: simple unit-system combination, since these units are self-adapting to the characteristics of the actual system, thereby avoiding delicate, time-consuming calibrations. Easy connection to the service system plus a simple control system and easy maintenance drastically reduce work requiring specialised personnel with consequent reduction in installation costs;
- extended operating limits to keep the system running, even under exceptional start-up and load conditions;
- customisation of the unit, also for special requirements both in the civil and technological air-conditioning sphere, thanks to the many available optional accessories. The high performance fans and pump set accessories in particular enhance the qualities of flexibility and energy efficiency. The latter, for example, consistent with the concept of modularity, has two pumps in parallel, to monitor the system load variations better and to regulate the water flow in the critical system starting (or restarting) stages so that outside servicing is avoided.

The innovative and hi-tech features of multi Scroll chiller give this series a much higher quality than can generally be found on the market today.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Spring antivibration mounts*
- Compressor compartment and condenser coil protection grilles
- Shut-off valve on compressor suction and discharge
- High and low pressure gauges
- Pump set with 2 pumps
- Pump set with 2 pumps + 1 in stand-by
- Pump set with 3 pumps
- Pump set with 3 pumps + 1 spare onboard
- User side anti-ice electric heaters for hydronic group
- Aluminium cover for hydronic group
- Steel mesh filter on water side*
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Device for reducing consumption of the outdoor section fans
- Phase monitor
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger*
- Master-slave operation*
- Free contacts for compressor status
- Remote control with remote microprocessor control*

* Accessories supplied separately

Data referred to the following conditions:

(1) Internal exchanger water = 12/7 °C; ambient temperature = 35 °C
 (2) Internal exchanger water = 40/45 °C; air at external exchanger inlet = 6,1 °C W.B.

(3) Sound levels refer to units with full load under nominal test conditions.
 The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.
 (4) Internal exchanger water = 15/10 °C; glycol 30 %

KCCJ Air cooled water chiller for outdoor installation

KCCJ: Capacity from 183 kW to 657 kW

KCCJ is a highly energy efficient liquid chiller equipped with Scroll compressors, wide thermal exchange surfacees and electronically-controlled fans.

Thanks to its excellent performance at part load, ESEER seasonal efficiency puts it at the top of its category, enabling high-level savings on management costs over the entire annual cycle. Furthermore, the EXCELLENCE standard version has been located in energy efficiency class A while operating at full load.

KCCJ is also available in the compact PREMIUM version, perfected for reducing initial investments. It can be equipped with numerous accessories installed built-in, such as pumping groups, an energy recovery device and an inertial storage tank.

KCCJ is therefore the centralised solution for all applications which require high performance, operating continuity and management cost reduction.

Accessories

- Finned coil protection grill
- Anti-hall protection grilles
- Spring antivibration mounts*
- External copper/aluminium coil with acrylic covering
- External copper/aluminium coil with Fin Guard treatment (Silver)
- External copper/copper coil
- High and low pressure gauges
- Shut-off valve on compressor suction and discharge
- Electrical panel ventilation
- Electrical resistances (for heating the electrical panel)
- Phase monitor
- Multi-function phase monitor
- Power factor correction capacitors ($\cos\phi > 0.9$)
- Breakaway current reducing device (soft start)
- Serial communication module to BACnet supervisor
- Serial communication module to MODBUS supervisor
- Serial communication module to LonWorks supervisor
- Master-slave operation
- External section fan consumption reduction device with variable speed control (phase cutting) (only for EXCELLENCE version)
- Remote microprocessor control unit
- Compensation of set point with signal 0-10 V
- Set point compensation with 4-20 mA signal
- Set point compensation with outside temperature probe
- Set point compensation based on external Enthalpy
- Base spring vibration isolator*

* Accessories supplied separately

- (1) Data referred to the following conditions:
 - Internal exchanger water = 12/7 °C
 (2) According to EUROVENT the Total Power Input does not consider the pump share, required to overcome the pressure drop for the solution circulation inside the exchangers.
- (3) Recovery exchanger water option = 40/45 °C
 (4) PHE = plate exchanger
 (5) AX = axial-flow fan
 (6) Water outlet at a constant temperature = 7 °C

KCCJ Air cooled water chiller for outdoor installation

Product Code

Air Cooled chiller for
outdoor installation

KCCJ-a-b-c-d-eee-f-g-h

Version (a) _____

1 = Premium

2 = Excellence

Energy recovery (b) _____

0 = Not required

1 = Total energy recovery

2 = Partial energy recovery

Low temperature (c) _____

0 = Not required

1 = Low temperature water

Free cooling (d) _____

0 = Not required

1 = Direct free cooling

Size (eee) _____

80, 90, 100, 110, 120, 140, 160,

170, 180, 200, 220, 240

Number of compressors (f) _____

4, 5, 6

Acoustic Configuration (g) _____

1 = Compressor sound proofing

2 = Super silenced

Heat exchanger approvals (h) _____

1 = Clivet

2 = PED

KCCE Air cooled water chiller for outdoor installation

KCCE

KCCE: Capacity from 365 to 1525 kW

The KCCE offer following features:

- **Efficiency:** New high capacity screw compressors (over 1000 kW with just 2 compressors, 1500 kW with 3 compressors), water-cooled shell-and-tube exchangers specially developed for the gas R-134a. The air-cooled exchangers have been designed and made in-house to ensure best adaptation to the other refrigerant circuit parts. The compressors are managed with continual adjustment of the capacity and are fitted with an economiser circuit for further operating efficiency. The best compromise is thus reached to boost efficiency while limiting costs;
- **Self-adaptation:** New, modern and intelligent electronic control. This customisation allows better management of all the circuit components. Continual adapting of chiller operating parameters to the load conditions of the system in which it is installed reduces consumption and noise level, while the working life of the parts increases;
- **Sturdiness:** Load-bearing frame in enamelled hot-galvanised sheet metal with semi-hermetic double-screw compressors and shell-and-tube evaporator ensuring reliability and constant performance. All the finishes are meticulously applied to ensure the utmost weathering resistance even under extreme conditions of use.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Spring antivibration mounts *
- Compressor compartment and condenser coil protection grilles
- Hail grilles
- Shut-off valve on compressor suction and discharge
- Pump set with 2 pumps
- Pump set with 3 pumps
- User side anti-ice electric heaters for hydronic group
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Device for reducing consumption of the outdoor section variable speed fans (phase-cut)
- Device for reducing consumption of the outdoor section fans
- General isolating switch
- Magnetothermal circuit breakers
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger *
- Master-slave operation *
- Free contacts for compressor status
- Free contacts for compressor status and enabling
- Remote control with remote microprocessor control *

* Accessories supplied separately

Data referred to the following conditions:

(1) Internal exchanger water = 12/7 °C; external air temperature 35 °C
 (2) Sound levels refer to units with full load under nominal test conditions.
 The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.

(3) Internal exchanger water = 15/10 °C; glycol 30 %
 (4) DSW = twin-screw compressor

KCCE Air cooled water chiller for outdoor installation

Dimensions and functional spaces

CAUTION! For trouble-free operation of the unit it is essential to maintain the safety distances indicated by the green areas.

KCCF Air cooled water chiller for outdoor installation

KCCF

KCCF: Capacity from 364 to 1432 kW

The KCCF offer following features:

- **Efficiency:** New high capacity screw compressors (over 1000 kW with just 2 compressors, 1500 kW with 3 compressors), water-cooled shell-and-tube exchangers specially developed for the gas R-134a. The air-cooled exchangers have been designed and made in-house to ensure best adaptation to the other refrigerant circuit parts. The compressors are managed with continual adjustment of the capacity and are fitted with an economiser circuit for further operating efficiency. The best compromise is thus reached to boost efficiency while limiting costs;
- **Self-adaptation:** New, modern and intelligent electronic control. This customisation allows better management of all the circuit components. Continual adapting of chiller operating parameters to the load conditions of the system in which it is installed reduces consumption and noise level, while the working life of the parts increases;
- **Sturdiness:** Load-bearing frame in enamelled hot-galvanised sheet metal with semi-hermetic double-screw compressors and shell-and-tube evaporator ensuring reliability and constant performance. All the finishes are meticulously applied to ensure the utmost weathering resistance even under extreme conditions of use.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Spring antivibration mounts *
- Compressor compartment and condenser coil protection grilles
- Hail grilles
- Shut-off valve on compressor suction and discharge
- Pump set with 2 pumps
- Pump set with 3 pumps
- User side anti-ice electric heaters for hydronic group
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Device for reducing consumption of the outdoor section variable speed fans (phase-cut)
- Device for reducing consumption of the outdoor section fans
- General isolating switch
- Magnetothermal circuit breakers
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger *
- Master-slave operation *
- Free contacts for compressor status
- Free contacts for compressor status and enabling
- Remote control with remote microprocessor control *

* Accessories supplied separately

Data referred to the following conditions:

(1) Internal exchanger water = 12/7°C; external air temperature 35°C
 (2) Sound levels refer to units with full load under nominal test conditions.
 The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.

(3) Internal exchanger water = 15/10°C; glycol 30%
 (4) DSW = twin-screw compressor

KCCG Air cooled chiller for outdoor installation

Product Code

Air Cooled chiller
for outdoor installation

KCCG-a-b-c-ddd-e-f-g

Energy recovery (a) _____
0 = Without (standard)
1 = Partial recovery
2 = Total recovery

Low temperature (b) _____
0 = Standard
1 = Low temperature operation

Free cooling (c) _____
0 = Standard
0 = Direct free cooling

Size (d) _____
160, 180, 190, 200, 240, 280, 300,
320, 340, 360, 440, 480, 540, 600

Acoustic Configuration (e) _____
0 = Standard
1 = Compressor sound proofing
2 = Low noise configuration

Energy Efficiency (f) _____
0 = Temperate climate

Heat exchanger approvals (g) _____
1 = FWG Standard
2 = PED (European test)

KCCH Air cooled chiller for outdoor installation

KCCH

KCCH: Capacity from 388 to 1384 kW

The KCCH offer following features:

- **Efficiency:** New high capacity screw compressors (over 1380 kW with 2 compressors), water-cooled shell-and-tube exchangers specially developed for the gas R-134a. The compressors are managed with continual adjustment of the capacity and are fitted with an economiser circuit for further operating efficiency. In this way, the best result is achieved, highlighting the performance and reducing costs; all the series is in the ENERGETICCLASS "B"
- **Self-adaptation:** This customisation allows better management of all the circuit components. Continual adapting of chiller operating parameters to the load conditions of the system in which it is installed reduces consumption and noise level, while the working life of the parts increases;
- **Sturdiness:** Load-bearing frame in enamelled hot-galvanised sheet metal with semi-hermetic double-screw compressors and shell-and-tube evaporator ensuring reliability and constant performance. All the finishes are meticulously applied to ensure the utmost weathering resistance even under extreme conditions of use.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Spring antivibration mounts*
- Compressor compartment and condenser coil protection grilles
- HydroPack with 2 pumps
- HydroPack with 3 pumps
- Set point compensation with 4-20 mA signal
- Set point compensation with 0-10 V signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Device for reducing consumption of the outdoor section variable speed fans (phase-cut)
- Device for reducing consumption of the outdoor section fans of the ECOBreeze
- General isolating switch
- Magnetothermal circuit breakers
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LonWorks serial converter kit
- Data logger*
- Master-slave operation*
- Free contacts for compressor status
- Free contacts for compressor status and enabling
- Clean contacts for compressor enabling and status, local/off/BMS selector
- Remote control with remote microprocessor control*
- Compressor suction shut-off valves
- Soft Start

* Accessories supplied separately

0 = FWG Standard
1 = PED (European test)

KCDG Air cooled chiller and heatpump for outdoor installation

KCDG

KCDG: Capacity from 29,1 to 99,8 kW

KCDG comprises a series of high temperature heat pumps, ideal as a one-stop heating, cooling and hot water solution for centralised systems in residential complexes, hotels and collective buildings in general.

- **Efficiency:** Energy Efficiency CLASS A rating, in both heating and cooling mode;

Ideal for all system types, including radiator systems with hot water production up to 60°C, at outdoor air temperatures down to -10°C;

System simplification thanks to the use of a single generator for heating and cooling, doing away with the risks and maintenance costs associated with traditional combustion systems.

The units in the KCDG range offer autonomous hot water production and are enabled for use with solar panel heaters, making it possible to use direct solar energy.of use.

Accessories

- Rubber antivibration mounts
- Finned coil protection grilles
- Phase monitor to check the presence and correct sequence of the power supply phases
- 3 ways-valve
- Domestic hot water kit control
- Multi-function keypad holder

* Accessories supplied separately

- A2/W55 internal exchanger water 50/55°C; external air temperature 2°C D.B. / 1,1°C W.B.
- A-5/W55 internal exchanger water 50/55°C; external air temperature -5°C D.B. / -5,4°C W.B.
- A35/W18 internal exchanger water 23/18°C; external air temperature 35°C
- A35/W7 internal exchanger water 12/7°C; external air temperature 35°C

- (2) The total power input is the total power absorbed by the compressors + fans - the power absorbed by the fan to supply the remaining available static pressure to the system + the power absorbed by the auxiliary circuit.
- (3) EUROVENT COP: coefficient of performance in heating mode. Relationship between heating capacity output and power input according to EUROVENT. The power input is the total power absorbed by the compressor + fan + auxiliary circuit + defrost cycles.
- (4) COP (EN 14511:2004) coefficient of performance in heating mode. Relationship between heating capacity output and power input according to standard EN 14511:2004. The power input is the total power absorbed by the compressor + fan + auxiliary circuit + defrost cycles + part of the pump to overcome internal pressure drops.
- (5) EUROVENT EER calculated as the relationship between the cooling capacity and the total power input.
- (6) Water flow and available static pressure in winter operating conditions A7/W35: water at the internal heat exchanger 30/35°C; outdoor air temperature 7°C D.B. / 6°C W.B.
- (7) Sound levels refer to units with full load under nominal test conditions. The sound pressure is measured at 10 m from the external surface of the unit in open field conditions.

KC(E,F)(A,B,C) Air cooled water chiller/heat pump for indoor installation

KC(E,F)A

KC(E,F)B

KC(E,F)C

KC(E,F)A: Capacity from 4.47 to 22.7 kW

The liquid chillers and heat pumps of the KC(E,F)A series are units designed for indoor installation and best energy efficiency in relation to their reduced size. The KC(E,F)A chillers offer following features:

- **Self-adaptation**, adaptability of operating parameters to the load conditions of the connected system, thereby optimising consumption, efficiency and working life of the parts;
- **Easy installation**, easy, quick installation thanks to the standard hydronic group and the factory test carried out prior to dispatch.
- use of a centrifugal fan, which allows the air from the condensing section to be ducted.

Accessories

- Rubber antivibration mounts *
- Condenser coil in copper/aluminium with acrylic coating
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Copper/copper condenser coil
- Serial communication module (MODBUS) *
- Device for operation with low external air temperature with variable fan speed through inverter (sizes 71÷91)
- Steel mesh filter on water side *
- Room keypad *
- Phase monitor *
- Set point compensation with according to outdoor enthalpy *
- Set point compensation with 4-20 mA signal *
- Supply voltage 230/1/50 (for sizes 31-41)
- Supply voltage 400/3/50+N (for sizes 17÷25)
- Unit without hydronic group
KCEA only:
 - Device for operation with low external air temperature with variable fan speed (sizes 17÷61) *
 - Set point compensation with fresh air sensor *

* Accessories supplied separately

KC(E,F)B: Capacity from 25.5 to 62.1 kW

The liquid chillers and heat pumps of the KC(E,F)B series are units designed for indoor installation and best energy efficiency in relation to their reduced size. Use of low-rev centrifugal fans and special thermal and acoustic insulation of the cabinet have resulted in highly reduced noise levels. The head pressures available with centrifugal fans enable wide ducting for air intake and cooled air discharge to be installed.

Accessories

- Supply voltage 400/3/50 without neutral
- Rubber antivibration mounts *
- High and low pressure gauges
- Outlet uprated electric motor
- Non-standard belt and pulley drive
- Front outlet plenum *
- Steel mesh filter on water side *
- Remote control with remote microprocessor control *
- Daily and weekly programming clock *
- KCEB only:
 - Device for operation with low external air temperature with variable fan speed through inverter
 - Anti-ice electric heater to protect the internal exchanger
 - Serial communication module PC/BMS MODBUS for 1 unit (Master) *
 - Serial communication module PC/BMS MODBUS from 2 to 254 units (Slave) *
- KCFB only:
 - Device for operation with low external air temperature with variable fan speed *
 - Condensate collecting tray with electric heater
 - Serial communication module with RS485/RS232 serial converter kit *

* Accessories supplied separately

KC(E,F)C: Capacity from 72.1 to 144 kW

The liquid chillers and heat pumps of the KC(E,F)C series are units designed for indoor installation and best energy efficiency in relation to their reduced size. Use of low-rev centrifugal fans and special thermal and acoustic insulation of the cabinet have resulted in highly reduced noise levels.

The head pressures available with centrifugal fans enable wide ducting for air intake and cooled air discharge to be installed.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Copper/copper condenser coil
- Copper/tinned copper condenser coil
- Spring antivibration mounts *
- Rubber antivibration mounts *
- High and low pressure gauges
- Steel mesh filter on water side *
- Uprated electric fan motor
- 4/8-pole electric fan motor
- Horizontal air outflow
- Upward air outflow
- Magnetothermal circuit breakers
- Compressor and fan thermal cutouts
- Phase monitor
- Daily and weekly programming clock
- Shunt capacitors (power factor > 0,9)
- Serial communication module PC/BMS MODBUS for 1 unit (Master)
- Remote control with remote microprocessor control *
- KCEC only:
 - Anti-ice electric heater to protect the internal exchanger
- KCFC only:
 - Condensate collecting tray with electric heater

* Accessories supplied separately

Data referred to the following conditions:

- (1) Internal exchanger water = 12/7 °C; external air temperature 35 °C
 (2) Total input is obtained from compressor input + fan input + circulating pump input - proportional part of the water pump to supply the available head to installation input + auxiliary circuit input.

- (3) Ambient temperature = 7 °C (R.H. = 85 %); external exchanger water outlet temperature 45 °C
 (4) ROT = rotary compressor
 (5) Sound levels refer to units with full load under nominal test conditions. The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.

Dimensions and functional spaces

CAUTION! For trouble-free operation of the unit it is essential to maintain the safety distances indicated by the green areas.

KCED Air cooled chiller for indoor installation

KCED: Capacity from 173 to 257 kW

The KCED chiller series presents a new concept of chiller. The KCED units are designed for indoor installation with ducted discharge for chilled water solutions.

These units offer:

- Efficiency that increases as the heating load decreases, while guaranteeing maximum requested load when necessary. KCED chiller always ensures maximum comfort with very high efficiency and consequently considerable energy savings;
- Simple unit-system combination, since these units are self-adapting to the characteristics of the actual system, thereby avoiding delicate, time-consuming calibrations. Easy connection to the service system plus a simple control system and easy maintenance of all the most sensitive parts drastically reduce work requiring specialised personnel with consequent reduction in installation costs;
- The particular abundance of optional accessories allows customisation of the unit, also for special requirements both in the civil and technological air-conditioning sphere. In particular the optional pump set water circulating unit, consistent with the concept of modularity, has several pumps in parallel (up to 3), to monitor the system load variations better and to regulate the water flow in the critical system starting (or restarting) stages so that outside servicing is avoided.

The innovative and hi-tech features of KCED air cooled chiller give this series a much higher quality than can generally be found on the market today.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Spring antivibration mounts *
- Shut-off valve on compressor supply and return
- High and low pressure gauges
- Pump set with 2 pumps
- Pump set with 2 pumps + 1 in stand-by
- Pump set with 3 pumps
- Pump set with 3 pumps + 1 spare onboard
- User side anti-ice electric heaters for hydronic group
- Steel mesh filter on water side*
- Set point compensation with 4-20 mA signal
- Set point compensation with fresh air sensor
- Set point compensation with according to outdoor enthalpy
- Uprated electric fan motor
- 4/8-pole electric fan motor
- Kit for low external temperatures with variable fan speed with inverter
- Horizontal air supply
- Upward air supply
- Phase monitor
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger*
- Master-slave operation*
- Free contacts for compressor status
- Remote control with remote microprocessor control*

* Accessories supplied separately

KCME Condenserless water chiller for indoor installation

KCME

KCME: Capacity from 4,8 to 138 kW

The condenserless water chillers of the KCME series are units designed for indoor installation to be matched with a remote condenser.

These units are particularly suitable for noise-sensitive environments and for resolving problems concerning the space occupied by a packaged chillers.

The condenserless water chillers in the KCME series have been designed for combination with the air-cooled chillers of the KCRC series.

Accessories

- Manifold for unit with double exchanger
- Serial communication module PC/BMS MODBUS for 1 unit (Master)*
- Serial communication module PC/BMS MODBUS from 2 to 254units (Slave)*
- Steel mesh filter on water side*
- Daily and weekly programming clock*
- Phase monitor*
- Remote control with remote microprocessor control Supply voltage 400/3/50 without neutral (sizes 17-21)*
- Liquid line solenoid valve

* Accessories supplied separately

KCRC Remote condenser, air cooled for outdoor installation

KCRC

KCRC: Capacity from 9.1 to 277 kW

The remote air-cooled condensers in the KCRC series are designed for connecting to the indoor evaporating units of the KCME range.

They are available in three soundproofing versions: standard (b=1), low noise (b=2) and extra low noise (b=3), to satisfy even the severest of requirements in terms of noise limits.

They are fitted with axial-flow fans with open inlet and outlet, suitable for installation outdoors, with large exchange surfaces and fan speed adjustment (optional) to optimise the cooling performance of the coupled units. All the units comply with Fläkt Woods high quality standards and undergo severe tests during assembly.

Accessories

- Condenser coil in copper/copper
- Condenser coil with double circuit
- Mounts for horizontal condenser coil installation units (Slave)*
- Fan switch (sizes 302÷602)
- Liquid receiver kit *
- Low temperature liquid receiver kit *
- Low external air temperature pressure-switch device
- Sub-cooling circuit
- General isolating switch (sizes 25÷201)
- Packing in wooden case*

* Accessories supplied separately

KCRC Remote condenser, air cooled for outdoor installation

KCSA Small air cooled DX condensing unit for outdoor installation

KCSA: Capacity from 7.02 to 19 kW

These appliances are the outdoor unit of the SPLIT SYSTEMS. They may be connected to exchanger coils of air-handling units. The use of external rotor fans with a low number of revs, the complete thermal and acoustic insulation of the compressor compartment, the variable speed of fans and the adoption of the "SCROLL" compressor make the KCSA unit particularly silent. Moreover, the reduced dimensions allow it to be installed in small spaces. All the units feature the new control and microprocessor regulation systems which optimize the performances and include:

- Display for the visualization of the state of operation and of the alarms
- control over condensation based on the temperature of fresh air (modulating variation of the fan speed)
- control over defrosting
- compressor functioning time count
- possibility of connection to a supervisor

Accessories

- Rubber antivibration mounts
- Remote keypad
- Serial communication module PC/BMS MODBUS for 1 unit (Master)
- Serial communication module PC/BMS MODBUS from 2 to 254 units (Slave)
- Connection set (thermostat, dehydrating filter, liquid flow gauge, check valve)
- Phase monitor

KC(S,T)B Small/medium air cooled DX/heat pump condensing unit for outdoor installation

KC(S,T)B

KC(S,T)B: Capacity from 22 to 72.8 kW

These split system are designed for outdoor installation and connection to a DX coil in the air handling unit. The use of low-rev external rotor fans, full thermal and acoustic insulation of the compressor compartment, variable fan speed and scroll compressor make the units particularly low noise. Their reduced overall size also allows installation in restricted spaces. All units are fitted with the new microprocessor control and regulation system, which optimises performance.

Accessories

- Rubber antivibration mounts *
- Remote keypad *
- Condenser coil in copper/aluminium with acrylic coating
- Copper/copper condenser coil
- Serial communication module PC/BMS MODBUS for 1 unit (Master) *
- Serial communication module PC/BMS MODBUS from 2 to 254 units (Slave) *
- Low external air temperature pressure-switch device
- Coil protection grilles on external air side *
- Phase monitor *
- Supply voltage 230/3/50

KCSB only:

- Hot gas by pass
- Connection set (thermostat, solenoid valve, dehydrating filter, liquid flow gauge) *

KCTB only:

- Connection set (thermostat, dehydrating filter, liquid flow gauge, check valve) *

* Accessories supplied separately

KCS(C,D) Medium/large air cooled DX condensing unit for outdoor installation

KCSC

KCSD

KCSC: Capacity from 90.1 to 174 kW

The KCSC air-cooled condensing units have been designed for outdoor installation and for best energy efficiency in relation to reduced size. The compressors are of the hermetic Scroll type.

They are fitted with an innovative microprocessor control for regulating and optimising all unit functions, thereby increasing the energy efficiency. An enamelled, hot-galvanised sheet metal load-bearing frame with prepainted aluminium outer panelling ensures maximum resistance to weathering. The base, made from painted galvanised metal sections with holes to facilitate lifting and earthing the unit, guarantees even weight distribution.

All the units are factory assembled and tested and ready for operation after connection, with consequent substantial reduction in installation costs.

Accessories

- Condenser coil in copper/aluminium with acrylic coating
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Copper/copper condenser coil
- Copper/tinned copper condenser coil
- Spring antivibration mounts *
- Finned coil protection grilles
- Connection set (thermostat, filter, etc) *
- Hot gas by pass
- Phase monitor
- Magnetothermal circuit breakers
- Shunt capacitors (power factor > 0,9)
- Serial communication module with supervisor (MODBUS)
- Remote control with remote microprocessor control *

* Accessories supplied separately

KCSD: Capacity from 210 to 588 kW

The multi Scroll chiller series presents a new concept of chiller offering:

- Efficiency that increases as the heating load decreases, while guaranteeing maximum requested load when necessary. Multi Scroll chiller always ensures maximum comfort with very high efficiency and consequently considerable energy savings;
- customisation of the unit with the high performance fans accessory, which enhances the qualities of flexibility and energy efficiency;
- easy connection to the service system plus a simple control system and easy maintenance drastically reduce work requiring specialised personnel with consequent reduction in installation costs;
- customisation of the unit, also for special requirements both in the civil and technological air-conditioning sphere, thanks to the many available optional accessories.

The innovative and hi-tech features of multi Scroll chiller give this series a much higher quality than can generally be found on the market today.

KCSD is a condensing unit series for use together with a remote evaporating section.

Accessories

- Copper/copper condenser coil
- Copper/tinned copper condenser coil
- Condenser coil in copper/aluminium with Fin Guard (Silver) treatment
- Spring antivibration mounts *
- Compressor compartment and condenser coil protection grilles
- Hail grilles
- Shut-off valve on compressor suction and discharge
- Connection set (thermostat, filter, etc) *
- High and low pressure gauges
- Device for reducing consumption of the outdoor section fans
- Phase monitor
- Shunt capacitors (power factor > 0,9)
- CAN/MODBUS serial converter kit
- CAN/LON WORKS serial converter kit
- Data logger *
- Free contacts for compressor status
- Remote control with remote microprocessor control *

* Accessories supplied separately

KCSC Medium/large air cooled DX condensing unit for outdoor installation

Technical data

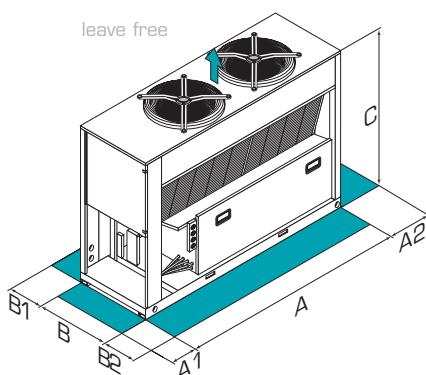

| Sizes | | 292 | 323 | 404 | 464 | 524 | 564 | 604 |
|--------------------------------|---------|------------|------------|------------|------------|------------|------------|------------|
| c = 0 Cooling capacity (1) | kW | 90,1 | 106 | 121 | 137 | 152 | 162 | 174 |
| c = 0 Total input | kW | 30,4 | 33,7 | 39,1 | 45,4 | 51,9 | 56,2 | 59,9 |
| c = 0 Sound pressure level (2) | dB(A) | 72 | 74 | 76 | 77 | 77 | 77 | 77 |
| c = 1 Cooling capacity (1) | kW | 85,8 | 102 | 117 | 131 | 145 | 155 | 164 |
| c = 1 Total input | kW | 30,8 | 33,8 | 38,5 | 45,4 | 52,4 | 57,1 | 62 |
| c = 1 Sound pressure level (2) | dB(A) | 63 | 65 | 67 | 67 | 68 | 68 | 68 |
| Number of refrigerant circuits | - | | | | 2 | | | |
| Number and type of compressors | - | 2 SCROLL | 3 SCROLL | | | 4 SCROLL | | |
| Power supply | V/Ph/Hz | | | | 400/3/50 | | | |

Data referred to the following conditions:

(1) Saturated suction temperature (SST) = 9,5 °C (Dew Point); external air temperature 35 °C

(2) Sound levels refer to units with full load under nominal test conditions. The sound pressure is measured at 1 m from the external surface of the unit in open field conditions.

Dimensions and functional spaces

CAUTION! For trouble-free operation of the unit it is essential to maintain the safety distances indicated by the green areas.

KCPA Pumping unit with storage tank for indoor installation

KCPA

The KCPA pumping units are designed for connection to our chiller and heat pump units for producing chilled and hot water. They come complete with all the necessary electrical and water components for trouble-free operation of the system.

The performance range of the installed centrifugal pumps makes the units suitable for all types of service systems.

The units may be used on systems with primary and secondary circuit.

Accessories

- 65-litre tank capacity
- 150-litre tank capacity
- Hose kit 0,8 m *
- Hose kit 1,5 m *
- Hose kit 2,0 m *
- Ball valve kit for connection to the system *
- Set-up for operation as primary circuit and fittings for secondary circuit

* Accessories supplied separately

KCPB Pumping unit with storage tank for outdoor installation

KCPB

KCPB-1

Pumping unit to be combined with our units for the production of chilled and hot water, complete with all the indispensable water and electrical parts for correct operation of a central water plant.

KCPB-2

These differ from the KCPB-1 because, in addition to the pumping and control functions, they also provide for water storage.

The capacity of the tanks is 300 - 500 - 2 x 300 - 2 x 500 litres.

Accessories

- Hose kit 1,5 m [1 exchanger x 1"] *
- Hose kit 1,5 m [2 exchanger x 1"] *
- Hose kit 1,5 m [1 exchanger x 2"-2"1/2] *
- Supply voltage 400/3/50+N

Only KCPB-1:

- One pump
- Two pumps

Only KCPB-2:

- Storage tank 300 litres 1 Pump
- Storage tank 300 litres 2 Pumps
- Storage tank 500 litres 1 Pump
- Storage tank 500 litres 2 Pumps
- Storage tank 600 litres 1 Pump
- Storage tank 600 litres 2 Pumps
- Storage tank 1000 litres 1 Pump
- Storage tank 1000 litres 2 Pumps
- Three-way valve kit for storage tank from 300 litres to 500 litres
- Three-way valve kit for storage tank from 600 litres to 1000 litres
- 8 kW Add. el. heater for storage tank from 300 litres to 500 litres
- 8 kW Add. el. heater for storage tank from 600 litres to 1000 litres
- 12 kW Add. el. heater for storage tank from 300 litres to 500 litres
- 12 kW Add. el. heater for storage tank from 600 litres to 1000 litres
- 16 kW Add. el. heater for storage tank from 600 litres to 1000 litres
- 24 kW Add. el. heater for storage tank from 600 litres to 1000 litres

* Accessories supplied separately

KCPC Pumping unit with storage tank for outdoor installation

KCPC

Pumping units with storage tank to be combined with units for the production of chilled and hot water, complete with the indispensable water and electrical parts for correct operation of the system. They have been designed for connection to our medium power units and come with steel tanks with a capacity of 2 x 300 and 2 x 500 litres.

The range of capacity and head of the pumps makes these units suited to many types of systems.

Accessories

- 600-litre tank capacity
- 1000-litre tank capacity
- 12 kW additional electric heaters
- 8 kW additional electric heaters
- Water side protection differential pressure switch

KCPD Pumping unit with storage tank for indoor installation

KCPD

KCPD: Capacity from 1.5 to 11 kW

The KCPD pumping units are modular and designed for connection to units for the production of chilled and hot water.

They come complete with all the indispensable electrical and water components for correct operation of the system.

They have been designed for connection to our high power units and may be supplied either separately or integrated into the structure of the chillers with semi-hermetic compressors.

The range of capacity and head of the pumps makes these units suited to many types of systems, also thanks to the possibility of having a primary or primary/secondary circuit.

The KCPD units are factory assembled and tested and are ready for operation as soon as they are connected to the electricity and water supplies.

Accessories

- Water side differential pressure switch
- Silenced 4-pole pumps
- 2 kW anti-ice electric heater with safety thermostat
- Shut-off valves for connection to the system (P version only) *

* Accessories supplied separately.

Water cooled chiller for indoor installation

| | |
|---|---|
|  | KCGA: Capacity from 5,95 to 35 kW |
|  | KC(G,H) B: Capacity from 27,1 to 144 kW |
|  | KCGC: Capacity from 195 to 560 kW |
|  | KCGE: Capacity from 408 to 153 kW |
|  | KCGF: Capacity from 173 to 500 kW |
|  | KCGH: Capacity from 633 to 1711 kW |

Contact Fläkt Woods for further information or technical catalogues regarding Water cooled chillers.

We Bring Air to Life

Fläkt Woods is a global leader in air management. We specialise in the design and manufacture of a wide range of air climate and air movement solutions. And our collective experience is unrivalled.

Our constant aim is to provide systems that precisely deliver required function and performance, as well as maximise energy efficiency.

Solutions for all your air climate and air movement needs

Fläkt Woods is providing solutions for ventilation and air climate for buildings as well as fan solutions for Industry and Infrastructure.

● **Air Handling Units (AHUs)**

Modular, compact and small AHU units. Designed to ensure optimisation of indoor air quality, operational performance and service life.

● **Air Terminal Devices and Ducts**

Supply and exhaust diffusers and valves for installation on walls, ceiling or floor are all included in our large range and fit all types of applications.

● **Chilled Beams**

Active induction beams for ventilation, cooling and heating, and passive convection beams for cooling. For suspended or flush-mounted ceiling installation – and multi-service configuration. With unique Comfort Control and Flow Pattern Control features.

● **Residential ventilation**

A complete range of products for residential ventilation. Consists of ventilation units, exhaust air fans and cooker hoods designed to optimise indoor comfort and save energy.

● **Fans**

Advanced axial, centrifugal and boxed fans for general and specialist applications. Comprehensive range including high temperature and ATEX compliant options. Engineered for energy efficiency and minimised life cycle cost.

● **Chillers**

Air-cooled and water-cooled chillers with cooling capacity up to 1800kW. Designed to minimise annual energy consumption in all types of buildings.

● **Controls and drives**

Variable speed drives and control systems, all tested to ensure total compatibility with our products. Specialist team can advise on energy saving and overall system integration.
